KEEP IT FRESH

Washable models made of high quality microfiber with antibacterial lining.

TECHNICAL INFORMATION TO A COLLECTION OF BNN WHITE

The antibacterial technology AEGIS

This technology is based on the fixation of nano-layer on the permanent threads. This technology can be used for all types of fibres (natural, synthetic, mixed).

The antibacterial technology **AEGIS** is suitable for use in many areas, where the emphasis is on freshness, hygiene, comfort and safety. Antibacterial layer creates a wall put against undesirable organisms. Antibacterial treatment is safe, does not cause allergy, it is friendly to nature. It does not contain any heavy metals and other dangerous substances. Bacteria, microbes, fungi, yeasts are in contact with the treated surface directly destroyed.

Shoes can be washed **in washing machine at 30° C** with the addition of detergent with a neutral pH. It is recommended to use powder for washing of children's linen. Drying must be carried out at ambient temperature, ideally in properly ventilated areas.
